

Iván Solís

LAST-MINUTE BUYER

Designated buyer for a WhatsApp group. Locks 2–3 seats together on mobile under weak data, with full price known before the map — or he abandons.

AGE / CITY 23 · Monterrey	SITUATION First job · mid budget	PAY Debit / OXXO / SPEI	DEVICE Android · 1-bar data	BASKET 2–3 seats together	CHANNEL WhatsApp → web	SESSION ~9 min under pressure
------------------------------	-------------------------------------	----------------------------	--------------------------------	------------------------------	---------------------------	----------------------------------

H2 Abandons because the fee is a surprise — not because the amount is high. Show all-in price early.

EventPurchaseClient.tsx:658
labels basePrice as “Total” · 03

JTBD · GROUP

Freeze contiguous seats before the chat changes its mind or the hold dies.

JTBD · PRICE

See base + fees + VAT before opening the seat map.

JTBD · PAY

Clear live status for debit, OXXO, and SPEI.

JTBD · ACCESS

Live QR on the order that works at the gate — not a screenshot.

CRITICAL FRICTIONS → CODE

FRICTION	ROOT CAUSE & IMPACT
Late fee reveal	Event UI calls basePrice “Total”; fee + VAT hit in cart → feels like bait-and-switch, instant abandon. EventPurchaseClient.tsx:658 · pricing.ts
Heavy seat map	Map fights one-thumb use on weak data; contiguous seats hard to lock before the group moves on. web/components/seatmap
Rigid hold	Timer runs while he confirms in WhatsApp; seats drop and he fails the group. HoldCountdown
OXXO / SPEI fog	Paid but status unclear → anxiety and “I paid / no ticket” support. DeferredPaymentPanel · reconcile-spei

PRODUCT REQUIREMENTS

- 1

All-in pricing from first screen
Same number on event, map, and cart. Kill the fake “Total”.
- 2

Hold that survives group chat
Visible renew + warning under 60s. Server expiry stays truth.
- 3

Plain-language OXXO / SPEI status
“Waiting for payment” / “Payment verified” — not bank jargon.
- 4

Live QR on the order
Regenerates in-app; static captures must fail at the gate.

KPI · CART

Mobile cart → pay on weak networks

KPI · HOLDS

Fewer holds expired without purchase

KPI · SUPPORT

Zero “I paid / no ticket” for OXXO-SPEI

LAST-MINUTE BUYER

Iván Solís

Fee surprise on the way to cart · journey phase 3 · WhatsApp group deciding in real time

CONTEXT

Fri 7:40 pm · bus · 1 bar · event tomorrow · 2–3 tickets

THINKS & FEELS01	SEES02	HEARS03	SAYS & DOES04
- Seats will vanish if the map is slow. - Fees at the end feel like a scam — even when fair. - Checkout should feel as fast as WhatsApp. - Afraid OXXO/SPEI won't register in time.	- Last-minute plans forming in group chat. - Seat maps that crawl on phone data. - Event prices that jump at checkout. - A “Total” that isn't what he'll pay.	“You buy — we'll transfer later.” “That site dies on sale day.” “Together or don't bother.” - A reseller link pasted as “cheaper.”	- Buys on mobile while commuting. - Screenshots → “yes or no?” in chat. - Compares new total to resale. - Price jumps → abandons → “couldn't get them.”
PAINS 1. Hold expires while the group debates → loses contiguous seats. 2. Surprise fees blow a tight monthly budget. 3. Weak signal blocks the map — or the QR at the gate.		GAINS 1. Final price from the first tap — no bait-and-switch. 2. Unambiguous payment confirmation (debit / OXXO / SPEI). 3. Live QR on the order, usable when signal is bad.
