

THE LAST-MINUTE BUYER

23 · Monterrey

First job

Android · limited data

Debit or OXXO

Buys 2–3 tickets

BOLETERA

01 / 02

USER PERSONA

Iván Solís

He decides with his friends, on the bus, the night before.

“We’re going, right? Just let me check there are still seats together — and that it doesn’t get crazy with the service fee.”

WHAT HE WANTS

- To walk in with his friends, seated together
- The final price *before* he picks a seat
- Proof that the ticket is real

WHAT BURNS HIM

- The service fee showing up only at the end
- A seat map he can’t work with one thumb
- The hold timer running while the group decides
- Paying at OXXO with no idea if it went through

BEHAVIOURAL PROFILE

Time pressure

HIGH

Usage frequency

LOW

Cash handling

MEDIUM

Money at risk

Physical conditions

HARSH

THE MOMENT THAT MATTERS

Friday, 7:40 pm. On the bus, one bar of signal. The show is tomorrow and the group is already asking. If the flow breaks once, he types “couldn’t get them” — and the night is over for five people, not one.

Inside Iván's head

Friday, 7:40 pm · on the bus · one bar of signal · the show is tomorrow

THINKS & FEELS

01

- “Are they trying to rip me off?”
- Afraid of missing out and of overpaying, at the same time
- That the seats together will be gone while the group argues

SEES

02

- One bar of signal and a half-loaded map
- A “Total” that isn’t the total
- WhatsApp notifications on top of the checkout

HEARS

03

- “Did you buy them yet?”
- “Together, or let’s not bother”
- “You get them, we’ll pay you back”

SAYS & DOES

04

- Screenshots the screen and sends it to the group
- Asks “yes or no?” before paying
- If the price jumps, closes the tab and types “couldn’t get them”

PAINS

Losing the seats together because the hold expired

A total that wasn’t the total, on a tight budget

Bad signal jamming the map — or the QR at the door

GAINS

Seeing the real price from the first tap

Clear confirmation that the payment went through

Walking in with his friends — no drama at the door
